Equipment Description:

The HORIBA MEXA and OBS system together form a comprehensive exhaust emission measurement setup widely used in automotive and engine testing laboratories for research, development, and certification purposes. These units work in coordination to ensure precise and reliable measurement of gaseous and particulate emissions under various test conditions, in compliance with global emission standards such as EPA, Euro, and Bharat Stage norms.

1. HORIBA MEXA (Motor Exhaust Gas Analyzer):

The MEXA is a high-precision analytical instrument designed to measure the concentrations of key exhaust gas components such as carbon monoxide (CO), carbon dioxide (CO₂), oxides of nitrogen (NO_x), total hydrocarbons (THC), methane (CH₄), and oxygen (O₂).

It employs a combination of advanced analytical techniques, including Non-Dispersive Infrared (NDIR), Flame Ionization Detection (FID), and Chemiluminescence Detection (CLD), depending on the pollutant being measured. The system provides real-time, accurate, and repeatable data, enabling engineers to assess engine combustion efficiency, fuel performance, and exhaust after-treatment effectiveness.

2. OBS (On-Board Emission Measurement System)

The OBS (On-Board System), often referred to as Portable Emission Measurement System (PEMS), is used to measure emissions directly on the vehicle under real driving conditions. It captures real-time data on gaseous emissions such as CO, CO₂, NO_x, and hydrocarbons while the vehicle operates on the road or a test track.

The OBS system integrates gas analyzers, flow meters, GPS, and data acquisition units, providing a complete emission profile in dynamic conditions that better reflect real-world performance.

It is especially useful for Real Driving Emission (RDE) testing, which complements laboratory-based results obtained through the MEXA and CVS systems.

Scope of Supply:

This procurement pertains to the supply of genuine overhauling spare parts for HORIBA make MEXA Analyzers and OBS, currently installed and operational in the VTL and ETL at

ATC Reference No. ICAT/GeM/PE-C1/APMK-Horiba Emission Analysers/2026-27/107

ICAT Centre – 1, Manesar (Haryana – India).

These analyzers are critical for the accurate measurement and analysis of exhaust gas emissions in compliance with applicable emission norms and testing standards. To ensure uninterrupted functionality, optimal performance, and continued compliance with regulatory requirements, periodic overhauling and preventive maintenance are essential. Accordingly, the procurement of OEM recommended spare parts is necessitated to carry out scheduled overhauling and to replace worn or obsolete components.

The required spare parts must be compatible with the existing HORIBA MEXA and OBS systems and sourced directly from the Original Equipment Manufacturer (OEM)/ Original Equipment Supplier (OES) or their authorized representatives, to maintain system integrity, calibration accuracy, and warranty conditions.

This procurement is aligned with ICAT's commitment to maintaining high standards of technical reliability, operational efficiency, and regulatory compliance within its emission testing infrastructure.
